

ZENITH

Mechanical & Dimensions

This document records the published physical dimensions, RF connector, mounting interface, and mechanical integration information for the Kalmix ZENITH full-band GNSS surveying antenna.

Physical Specifications

Use these values for tripod, pole, bracket, and fixed-installation planning.

Parameter	Specification
Dimensions	Diameter 150 x 61 mm.
Weight	<= 400 g.
RF connector	TNC-K female.
Mounting thread	5/8 in x 11 BSW coarse thread. Thread depth: <= 15 mm.

Mechanical Drawing Reference

The source Documentation page identifies a top, side, and bottom-view drawing with general dimensional tolerance of +/- 0.3 mm unless otherwise noted.

Source-image exception: the public mechanical-drawing image URL currently returns 404. This PDF preserves the published mechanical dimensions but does not reproduce the missing drawing. Obtain the original drawing file from the design archive before releasing it as a manufacturing-controlled document.

Installation Notes

Confirm the 5/8 in x 11 mount compatibility, RF cable path, TNC-K connector mating, receiver-side antenna bias, grounding, and weather exposure before deployment. The RF cable is not included and must be selected for the receiver-side interface and installation path.
